

## Student Management System

Create a `Student` model for a college.

### Requirements:

- Student name
- Roll number
- Email
- Phone number
- Course
- Year
- Date of admission
- Active/Inactive status

### Practice:

```
class Student(models.Model):  
    # Write your fields here  
    pass
```

**Think about:** `CharField`, `EmailField`, `IntegerField`, `DateField`, `BooleanField`.

## 2. Employee Management System

Create an `Employee` model for a software company.

### Requirements:

- Employee name
- Employee ID
- Email
- Department
- Job role
- Salary
- Joining date
- Currently working or not

### Practice:

```
class Employee(models.Model):  
    # Write your fields here  
    pass
```

**Challenge:** Make `employee_id` unique.

### 3. E-Commerce Product

Create a **Product** model for an online shopping website.

#### Requirements:

- Product name
- Product code
- Category
- Price
- Stock quantity
- Description
- Product available or not
- Created date

#### Practice:

```
class Product(models.Model):  
    # Write your fields here  
    pass
```

#### Challenge:

Make **product\_code** unique and automatically store the creation date.

### 4. Course & Training Management

Create a **Course** model for a training institute.

#### Requirements:

- Course name
- Course duration
- Course fee
- Trainer name
- Mode: Online / Offline
- Start date
- Number of seats
- Course active or not
